

A **hard refresh** is a way of clearing the browser's cache for a specific page, to force it to load the most recent version of a page. Sometimes, when changes are made to the website, they don't register immediately due to caching. A hard refresh will usually fix this, though occasionally completely clearing the cache is necessary.

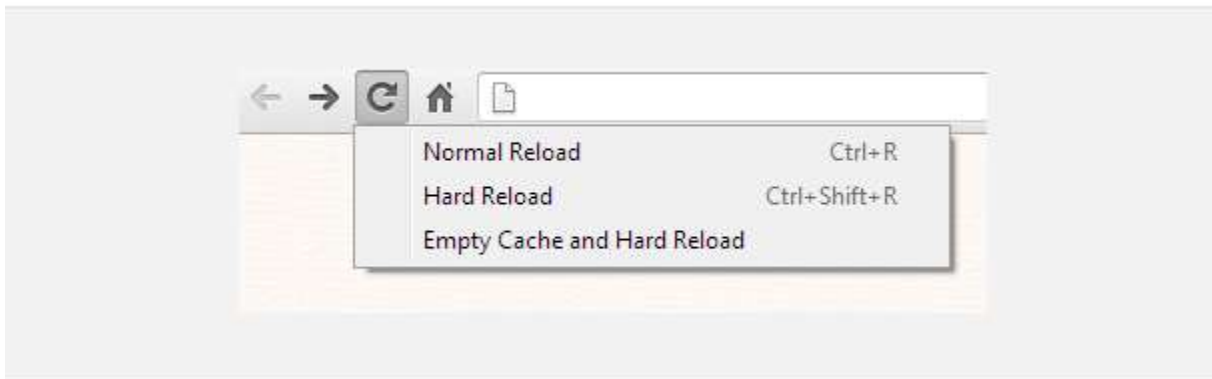

How to do hard refresh on various browsers?

Chrome:

Quick hard refresh can be done by using the following short cut keys

Windows or Linux:

1. Hold down Ctrl and click the Reload button.
2. Or, Hold down Ctrl and press F5.

Mac:

1. Hold ⌘ Shift and click the Reload button.
2. Or, hold down ⌘ Cmd and ⌘ Shift key and then press R.

Mozilla Firefox and Related Browsers:

Windows/Linux:

1. Hold the Ctrl key and press the F5 key.
2. Or, hold down Ctrl and ⌘ Shift and then press R.

Mac:

1. Hold down the ⌘ Shift and click the Reload button.
2. Or, hold down ⌘ Cmd and ⌘ Shift and then press R.

Internet Explorer:

1. Hold the Ctrl key and press the F5 key.
2. Or, hold the Ctrl key and click the Refresh button.
